**Absceso.**

# *¿Dónde se localiza la lesión?*

*I En términos muy generales la patología torácica puede ser:*

- 1) Extrapulmonar: parietal, pleural o mediastinal.*
- 2) Intrapulmonar: Parenquimatosa intersticial, alveolar o bronquial*

*II Precisar su localización anterior o posterior, determinar el lóbulo mas probablemente afectado, para lo cual se han descrito en las radiografías simples varios signos clásicos.*
